PRIVATE PROGRAMS

Our year-round private programs allow locals and visitors to experience Wyoming's extraordinary night skies in more intimate settings. We offer customized programs at private homes, conference halls, wedding venues, hotels, resorts, and inside Grand Teton National Park.

PUBLIC PROGRAMS

Wyoming Stargazing offers public stargazing programs, solar astronomy programs, planetarium programs, and indoor astronomy presentations throughout the year. Attendees leave the programs inspired by what they see and by what they learn from our knowledgeable staff.

SCHOOL PROGRAMS

We provide subsidized astronomy programming to public and private schools in Jackson Hole and the surrounding areas. Our unique STEAM (Science, Technology, Engineering, Arts, and Math) astronomy lessons are available for all grade levels to enjoy inside and out of the classroom.

WORLD ABOVE THE TETONS SPEAKER SERIES

Wyoming Stargazing is proud to carry on the longstanding local traditions of scientific inquiry and education as a means to a richer, more meaningful life here in the Tetons. That's why we launched The World Above the Tetons Speaker Series in 2018 to bring knowledgeable science experts to Jackson to answer some of our most pressing questions.

RENTALS

Private telescope rentals are available for experienced individuals to lead their own private stargazing program to enjoy the splendor of Wyoming's night skies. The Digital Planetarium System and the Dark Sky Pavilion -- an inflatable, weatherproof dome -- also make a wonderful addition for screening astronomy films at sleepovers, birthday parties, BBQs, or any festive occasion.

SNOW KING OBSERVATORY

Wyoming Stargazing shares a common interest with Snow King Mountain to create an observatory and planetarium at the summit of the mountain. If implemented as designed, the observatory will have one of the largest telescopes in the world dedicated to public outreach. The planetarium will offer amazing education resources to our community.

SAVE OUR NIGHT SKIES CAMPAIGN

Wyoming Stargazing has embarked on a campaign to Save Our Night Skies in Jackson Hole. With the help of The Town of Jackson, Teton County, Grand Teton National Park, and many other local partners, we seek to reduce light pollution in our valley.
